## **DETAILED ACTION**

### ***Allowable Subject Matter***

1. Claims 1-3, 4, 5, 9, 10, 12, 13, 15, 16, 17, 19 and 21-31 are allowed and are renumbered as 1-3, 4, 7, 8, 10, 11, 13, 14, 16, 18, 19, 20, 21, 22, 23, 4, 5, 9, 12, 15, 17, and 24.
2. The following is an examiner's statement of reasons for allowance: Claims 1-3, 4, 5, 9, 10, 12, 13, 15, 16, 17, 19 and 21-31 recites specific features in which the prior art of record neither anticipates nor renders obviousness. The closest prior art relevant to applicant's claimed invention is Kimoto et al. (US 6115611) which discloses a mobile hyperlink browser that communicates with a remote server (Col. 33, Lines 16-26) and receiving from a server, geographically dependent content that is customized to the geographical coordinates in the HTTP request (Col. 60, Lines 30-37).
3. With respect to claims 1, 4, 10, 13, 16, and 17, Kimoto et al. (US 6115611) discloses a mobile hyperlink browser that communicates with a remote server (Col. 33, Lines 16-26), accepting a designation of hyperlinked content from a user (Col. 55, Lines 18-31), and obtaining the geographical coordinates of the mobile client from a global positioning receiver associated with the mobile client (Col. 59, Line 60- Col. 60, Line 6), sending an HTTP request that includes geographical coordinates of a mobile client to the server (Col. 56, Lines 53-60), receiving from a server, geographically dependent content that is customized to the geographical coordinates in the HTTP request (Col.

60, Lines 30-37), the geographically-dependent content including a valid zone indicator indicating an area or range relative to the geographical coordinates in which the geographically-dependent content is valid and displayed on the mobile client (mapped area zoned from total area as areas within the dotted lines shows that a zone is valid for selection where map shows multiple zones within a range of the current location of the device on the mobile client, Fig. 25, Col. 38, Line 62-Col. 39, Line 4), wherein the range is customized in size by the server according to the geographic coordinates and the geographically dependent content (User scrolls selected area and range is customized by server through the retrieval of Map2, Map3, and Map4 to form the new range displayed including content, Col. 62, Line 37- Col. 63, Line 30 and Col. 38, Line 62-Col. 39, Line 4), comparing a current location of the mobile client to the valid zone (terminal side proxy checks demanded data from mobile phone against accumulated map data, Col. 60, Lines 7-13), determining that the geographically-dependent content is no longer valid based on the comparison (Col. 60, Lines 23-29), sending a new HTTP request that includes new geographical coordinates of the mobile client (Col. 60, Lines 23-29) and invalidating the geographically-dependent content when the mobile computer leaves an area (old map does not have new location and new map is retrieved and displayed in place of old map, Col. 60, Lines 30-50).

4. However Kimoto et al. fails to disclose receiving a response comprising a header including the geographical coordinates, and a valid radius indicator indicating a radius from the geographical coordinates within which the geographically-dependent content is

displayed and determining by the mobile client that the content is no longer valid based on the comparing when the mobile client leaves an area encompassed by the radius.

5. With respect to claims 2-3, 5, 9, 12, 15, 17, 19 and 21-31 are allowed for being dependent on an allowed base claim.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
